I can prep static map images.

I notice the Colorado River shrinks out of view at larger, region-size scales.

Let me see what I can find.

We could do that. But I do think we should put up some sort of map just to show the general area and the rivers. Can we do that?

Hey,

I just spoke to Harvey, he recommends we don't put maps with data points showing raw data with no context. It's problematic since the data is dependent on a variety of factors including time/date of the sample etc.

He recommended, instead, following what they did for CPP. That is, using a slidedeck to help tell the story.

<http://cleanpowerplanmaps.epa.gov/cpp/>

This reminded me of the comment Christie made where she talked about looking at a few specific sites and displaying data pre/during/post

Sure, copying our national geospatial support team on this. Who are you working with in Region 8? Also copying Region 8 GIS contacts.

Do you have an idea of how you want to present the data?

Harvey and Kim,

We're getting ready to go live with the spill web site for the Gold King Mine spill. On the call with the regions, the need for a way to map out the water sample data became pretty clear.

Can we engage your team to see what's possible with accomplishing this?

::Danny
